DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, 6, and 10-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aldridge et al. (US 6,038,700). Aldridge et al. (hereinafter Aldridge) discloses an upper body garment/jacket/coat/vest/shirt (10) including a base fabric/outer shell (26) having front and rear portions that has opening for the arms and the head and has a breast portion on the front portion, such that a first, substantially rectangular, shock absorbing protective panel (12) is attached to the left breast portion of the base fabric as shown in figure 1, which protects the upper body portion during descent from a vertical surface.

Additionally, a second, substantially rectangular, shock absorbing protective panel is attached to the right breast portion of the base in a non-overlapping configuration as shown in figure 1. Also, the garment includes a collar portion (20). The first and second panels are positioned completely over the left and right breast portion of the base fabric as shown in figure 1 and is made aramid fiber/KEVLAR, col. 4, lines 12-27. Furthermore, a pair of sleeves (14, 16) is attached to the base fabric for receiving the arms and a third protective panel defined by the liner (28) is attached to the forearm portion of each sleeve as shown in figure 5.

Art Unit: 3765

It would have been obvious to one skilled in the art at the time the invention was made to recognize that the protective panels of Aldridge made of aramid fibers can be formed from any desired strength, denier, weight, warp count, fill count, etc through routine experimentation or depending on the end use thereof.

5. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aldridge in view of Parker et al. (US 5,247,707). Aldridge discloses the invention as set forth above except for showing loops being attached to the front portion of the garment and having the bottom of the garment being attached to a safety belt by loops.

Parker et al. (hereinafter Parker) discloses loops (16) being attached to a front portion of a garment and having the bottom of the garment being attached to a safety belt (B) by loops (14) as shown in figure 1

It would have been obvious to one skilled in the art at the time the invention was made to provide the garment of Aldridge having loops being attached to the front portion of the garment and having the bottom of the garment being attached to a safety belt by loops as taught by Parker, so that desired items can be carried by the wearer while load is evenly distributed about the body or as required for a particular application thereof.

Response to Amendment

6. The amendment and arguments filed on June 27, 2007 has been considered and duly noted. In view of such, the amendment has prompted a newly discover prior art to be applied thus making this office action new-non final and the arguments are moot.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.
